

Guide: How to Automate Your Job Search with AI

Thank you for requesting the step-by-step tutorial! This guide covers the exact 2-minute setup to connect Claude with the internet via Apify, along with the high-conversion prompt to pull real-time, matched job listings instantly.

Part 1: The One-Time 2-Minute Setup

To search the live internet, Claude needs an external connection. We use a powerful web-scraping tool called **Apify** to act as Claude's hands and eyes across the web.

1. **Open Claude Connectors:** Log into your Claude AI account. Navigate to the settings or features panel and select **Connectors / Tools**.
2. **Find Apify:** Search for "Apify" in the integration marketplace and click **Install**.
3. **Get Your Free API Key:** Go to the official [Apify website](#) and sign up for a free account. Navigate to your Account Settings -> **API Tokens**, and copy your personal API token.
4. **Activate:** Return to Claude, paste your Apify API token into the prompt field or connector settings, and switch it **ON**.

Part 2: The 1-Line Job Matcher Prompt

Once Apify is active, upload your resume as a PDF or text file directly into the Claude chat window and paste the following prompt:

"Act as an expert technical recruiter. Analyze my attached resume, and then use your active Apify connector to scan live job boards and corporate career pages on the web. Find exactly 20 current, open, and high-paying jobs that match my core skill set. Format the output into a clean table containing four specific columns: 1. Company Name & Role Title, 2. Live Application URL, 3. Estimated Salary Range, and 4. My 'Interview Match %' based on how well my resume aligns with their requirements. Do not include expired roles."

Part 3: What to Expect Next

Within 10 seconds, Claude will output a structured table looking like this:

Company & Role	Live Link	Salary Range	Interview Match %
TechCorp Inc. — Senior Product Manager	View Job Listing	\$140,000 - \$165,000	94% Match
Innovate LLC — Data Analyst	View Job Listing	\$95,000 - \$110,000	88% Match

Stop blindly submitting applications to hundreds of generic listings. Use this data matrix to prioritize the roles where you hold the highest competitive advantage!
